

Nilai Water Testing

The water testing started with a trip to the Putra Jaya Wetlands park. We took a tour of the site:

At the top of the tower

The view from the top

Flamingo Park

Museum

Tour completed it was time to start the water testing

Testing the Wetland Cells

On our return to Nilai we completed the testing on the wetland cells and lake water. We also started testing the tap water from Nilai, Rohas Perkasa (Schlumberger's office in KL) and some bottled water produced by the reverse osmosis technique.

Water test comments

These water tests are simple to carry out. Most of the results are instant and quite accurate. These provide quick and good information for any layman that are interested to find out the quality of their water sources around them. (St David High School, Melaka, Malaysia)

The water testing is fun and easy to use. It will be easy to explain, with all the different colours for different tests. To prove that our waters are clean is fun. We can learn new things that are in the water... At the time of writing, we haven't got the results for the coliform bacteria, so I hope the tests will be good results. This will be easy to teach to the people back home. Till next time (Qabil, St David High School, Melaka, Malaysia)

I learned that we cannot judge the water quality according to the colour of the water. Though the water looks muddy, the quality of the water may be good. It is amazing. I am looking forward to another workshop like this in the future. (May Yun, Labuan)

Initially I have the misconception about the water in Malaysia – it is dirty, but now I learned that this is not true... I find that programmes like this should extend to all the students, teachers etc. Indeed it is a good opportunity for everyone to experience and have some hand on experiment. (Labuan)

...I had learnt from this water monitoring programme that although the water may look harmless, some of them are still not fit for human drinking... (Elvin, Labuan High School)

I conclude that, we have to conserve our water and share our experience and knowledge from this workshop to the communities... (ASAR, SK King George V, Seremban, N9)

...High Quality water is a great concern to people now and we should always be aware the water we consume in every day life is clean and bacteria free. It teaches us how take care of our water and never pollute it. (SMK Geliga, Kemaman, Malaysia)
